## DEPARTMENT OF GENERAL MEDICINE – DISCHARGE SUMMARY

| | |
|---|---|
| **Patient Name:** Ravi Kumar | **Age / Sex:** 52 Yrs / Male |
| **IP No:** IP-2025-44910 | **Admission Date:** 20-Feb-2025 |
| **Primary Consultant:** Dr. K. S. Murthy, MD | **Discharge Date:** 23-Feb-2025 |

### FINAL DIAGNOSES:

1. Type 2 Diabetes Mellitus with Mild Diabetic Ketosis
2. Essential Hypertension (Grade 1)

### HOSPITAL COURSE & MANAGEMENT:

52-year-old male with known history of type 2 diabetes presented with high fatigue and dehydration. Admission blood glucose was 340 mg/dL with positive urine ketones (2+). IV normal saline hydration and subcutaneous insulin sliding scale initiated under monitoring. By hospital day 2, urinary ketones cleared completely and blood glucose stabilized to 140-160 mg/dL. Patient transitioned uneventfully to oral antihyperglycemic therapy and is hemodynamically stable at discharge.

### DISCHARGE MEDICATIONS:

| Medication | Dose & Frequency | Instructions |
|---|---|---|
| Tab. Metformin | 500 mg BD | Take with breakfast and dinner |
| Tab. Telmisartan | 40 mg OD | Take in the morning |
| Tab. Pantoprazole | 40 mg OD | Take 30 mins before breakfast x 7 days |

### FOLLOW-UP & ADVICE:

- Strict diabetic renal-sparing diet; limit sodium intake.
- Monitor home fasting blood glucose thrice weekly.
- Follow up in Endocrine OPD in 2 weeks with repeat HbA1c and Serum Creatinine.
